1. Introduction

1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-Cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Cubic Defense System's interpretation and use of the CALS standards in transferring technical publication data. Cubic Defense Systems used its CALS Technical Data Interchange System to produce data in accordance with the standards and delivered it to the AFCTN technical staff on a 9-track magnetic tape.

2. Test Parameters

Test Plan: AFCTB 93-032

Evaluation Tools Used:

MIL-STD-1840A (TAPE)

SUN 3/280

AFCTN Tapetool v1.2.8 UNIX

XSoft CAPS/CALS v40.4

Texas Instrument (TI) Tapetool v1.0.1

MIL-M-28001 (SGML)

Cheetah Gold 486

Exoterica *XGMLNormalizer* v1.2e3.2

Exoterica *Validator* v2.0 EXL

McAfee & McAdam *Sema Mark-it* v2.3

Public Domain *sgmls*

Standards

Tested:

MIL-STD-1840A

MIL-M-28001A

3. 1840A Analysis

3.1 External Packaging

The tape arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a commercial overnight shipping bag. The exterior of the bag was marked with the magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3. The tape was protected against physical damage.

The tape was enclosed in a barrier bag as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1. Enclosed in the box was a packing list showing all files recorded on the tape.

3.2 Transmission Envelope

The 9-track tape received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

3.2.1 Tape Formats

The tape was run through the AFCTN *Tapetool* v1.2.8 utility. No errors were encountered while evaluating the contents of the tape labels.

The tape was also read using TI's version of *Tapetool* with no reported errors.

3.2.2 Declaration and Header Fields

No errors were found in the Document Declaration file or data file headers. The physical structure of the tape meets the CALS MIL-STD-1840A requirements.

4. IGES Analysis

No Initial Graphics Exchange Specification (IGES) files were included on the tape.

5. SGML Analysis

The AFCTB has several parsers available for evaluating submitted DTD and Text files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. These products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings unless specified in the report. Changes to DTD or Text files required by each system are not documented in the report.

The Text and DTD files from the tape were evaluated using another parser available within the AFCTB, with one reported error. The entity "shorttitle" was defined twice.

```
<!ENTITY % shorttitle DTD0144: Attempt to declare Parameter Entity Name  
'shorttitle' more than once denied.
```

The Text and DTD files from this document were evaluated using the Exoterica Validator parser with three noted errors. The first error is the dual reference to shorttitle. The other two errors are shown below.

```
<!-- **Warning** in "9332.sgm", line 1269:  
An element is not allowed in the document instance because it does not  
appear in any accessible content model or it is completely excluded.  
The element is "ENTRYTBL".  
-->  
<!-- **Warning** in "9332.sgm", line 4366:  
There is no element with an IDREF or IDREFS attribute value equal to a  
specified ID value.  
The unreferenced ID attribute value is "FIG7-6".  
-->
```

The Text and DTD files from this document were tested using the Exoterica *XGMLNormalizer* parser with no reported errors.

The Text and DTD files from the tape were evaluated using McAfee & McAdam's *Sema Mark-it* parser with one reported error, on the use of a character not permitted by SGML.

The Text and DTD files from the tape were evaluated using the Public Domain *sgmls* parser with no reported errors.

The DTD and Text files meet the CALS MIL-M-28001A specification.

6. Raster Analysis

No Raster files were included on this tape.

7. CGM Analysis

No Computer Graphics Metafile (CGM) files were included on this tape.

8. Conclusions and Recommendations

In summary, the physical tape structure from Cubic Defense Systems was correct. The tape could be read properly using the AFCTN *Tapetool* software without a reported error.

The DTD and Text files were parsed using several different products. Two products reported warnings which are defined in the error logs in the Appendix to this report. The SGML and DTD files meet the CALS MIL-M-28001A specification.

The tape and data files from Cubic Defense Systems meet the CALS MIL-STD-1840A requirements.
